7. Who is a General Physician?

A general physician (GP) is a medical doctor specializing in nonsurgical adult healthcare. They treat various diseases not requiring surgery, encompassing cardiovascular, respiratory, neurological, hematological, endocrine, and gastrointestinal systems. Some GPs may develop sub-specialties within these areas.

8. What are the educational requirements to become a General Physician?

General physicians, also known as primary care physicians, require completion of medical school followed by a primary care residency. Prerequisites include a science-based bachelor's degree, a minimum GPA, and successful completion of medical school and basic medical training. A three-year residency commitment is necessary.

9. When should I consult a General Physician?

Consult a general physician for various health concerns, including cardiovascular, respiratory, musculoskeletal, neurological, gastrointestinal, and endocrine issues manageable without surgery. They are your primary point of contact for most health problems.

10. Do General Physicians offer home consultations?

General practitioners (GPs) provide comprehensive primary care, including check-ups, immunizations, and treatment for various medical conditions. They manage patients across age groups. Home consultations are at the discretion of the individual GP; however, routine examinations may be available at home.
