Who is a General Physician?

A general physician (GP) is a medical doctor specializing in non-surgical adult healthcare. GPs treat various diseases and conditions affecting multiple body systems, including cardiovascular, respiratory, neurological, haematological, endocrine, and gastrointestinal, without requiring surgery. Some GPs may further specialize within these systems.

What are the education requirements to become a General Physician?

General Physicians, also known as primary care physicians, require a medical degree followed by a 3-year residency in primary care. Prerequisites include a science-based bachelor's degree, a minimum GPA, successful medical school completion, and foundational medical training.

When should I consult a General Physician?

A general physician provides primary care for various health concerns. They manage cardiovascular, respiratory, musculoskeletal, neurological, gastrointestinal, and endocrine system issues treatable without surgery. Consult a general physician for symptoms affecting these systems.

Do General Physicians offer home consultations?

General practitioners (GPs) provide comprehensive healthcare services, including physical exams, immunizations, and treatment for various medical conditions. They manage patients across age groups. However, offering home consultations is at the discretion of the individual GP. Home visits may be available for general check-ups or routine examinations.

Can a General Physician perform surgery?

No. General physicians specialize in primary care, offering non-surgical treatments for illnesses and injuries. Surgical procedures are performed by general surgeons, not general physicians. Physicians focus on primary care, building patient relationships, and utilizing methods such as medication and physical therapy.
