8. Who is a General Physician?

A general physician (GP) is a medical doctor specializing in non-surgical adult healthcare. They treat various diseases and conditions affecting multiple body systems, including cardiovascular, respiratory, neurological, hematological, endocrine, and gastrointestinal, without requiring surgery. Some GPs may further specialize within these systems.

9. What are the educational requirements to become a General Physician?

General physicians, also known as primary care physicians, require completion of a medical residency program following medical school graduation. Prerequisites include a science-based bachelor's degree, a minimum GPA, medical school completion, and foundational medical training. A three-year residency commitment is necessary.

10. When should I consult a General Physician?

Consult a general physician for a wide range of non-surgical health concerns. These include cardiovascular, respiratory, musculoskeletal, neurological, gastrointestinal, and endocrine system issues. A GP is your first point of contact for most health problems.

11. Do General Physicians offer home visits?

General practitioners (GPs) provide comprehensive healthcare services, including physical exams, immunizations, and treatment for various medical conditions across all age groups. Home consultation availability varies by physician; however, some GPs may offer home check-ups or routine examinations.
