Who is an endocrinologist?

Endocrinologists are medical doctors specializing in diagnosing and treating hormone-related disorders. These specialists manage conditions affecting the endocrine glands and their hormone production, aiming to restore hormonal balance through appropriate medical treatment. They are experts in hormone imbalances.

What symptoms warrant a consultation with an endocrinologist?

An endocrinologist may be recommended by your primary care physician if you experience symptoms such as excessive sweating, hyperglycemia, hypertension, menstrual irregularities, acne, delayed puberty, hirsutism, infertility, weight fluctuations, myopathy, osteopenia, developmental delays (in children), skeletal abnormalities, or fatigue. These symptoms may indicate underlying hormonal imbalances requiring specialized endocrinological care.

What diseases does an endocrinologist treat?

Endocrinologists specialize in diagnosing and treating hormonal disorders. These include diabetes, hypertension, osteoporosis, menopause symptoms, female hormonal imbalances, endocrine gland cancers, thyroid and parathyroid disorders (hyperthyroidism, hypothyroidism), Cushing's syndrome, infertility, erectile dysfunction, bone metabolism diseases, obesity, and polycystic ovary syndrome (PCOS).
